Guarding the Guardians: Research on

EDITORIAL PEER REVIEW

Following the success of the American Medical Association's First International Congress on Peer Review in Biomedical Publication, a second such Congress is being planned for September 1992. We aim to present original research on critical issues in the publication of all clinical and scientific research.

What are such critical issues?

- The mechanisms of peer review and editorial decision making in different journals
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated.
- Allocation of responsibility for published material
- Quality assurance
- Breakdowns, weaknesses, and biases

For more information on attending or presenting research, contact:

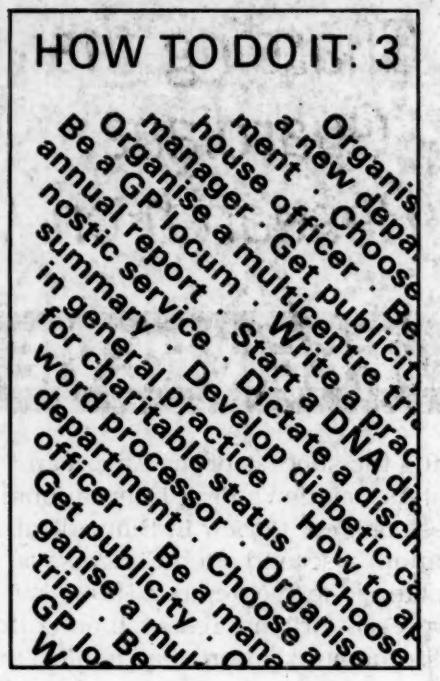
BEGIN PLANNING YOUR RESEARCH PROTOCOLS NOW!

You don't know everything



But often in a medical career it seems as if you are expected to. When confronted with a problem you've never met before the only thing to do is to ask the experts—but where are the experts who are never on holiday, never off sick, in a meeting, or simply unavailable? In *How To Do It: 3,* that's where. You can keep them in your pocket, and in a few minutes they can tell you, among many other things, how to:

- lecture overseas
- be a manager
- prepare a Festschrift
- commission a portrait
- write a practice annual report
- organise multicentre trials
- start a DNA diagnostic service
- survive a dinner

Two companion volumes of essential know-how are also available

Price (each book): Inland £6.95; Abroad £9.00
BMA members: Inland £6.45; Abroad £8.50

Did ed, BMJ, murder his wife?

Supposedly based on rumoured events in the life of Ernest Hart, a great but undervalued editor of the *BMJ*, Frank Danby's novel *Dr Phillips: a Maida Vale Idyll* was first published in 1887. Unlike many popular Victorian novels it is concisely plotted; its style is pithy; the characters are sympathetic and believable; and the author's presentation of Jewish life in the late nineteenth century is uncompromisingly honest. But is the character of "Dr Phillips" a portrait of Hart? In his introduction to the new Keynes Press edition Stephen Lock, present editor of the *BMJ*, places the novel in its literary and historical context and examines the character and achievements of Ernest Hart.

Beautifully printed and bound, and with illustrations by Tabitha Salmon, this edition of *Dr Phillips: a Maida Vale Idyll* will fascinate those interested in literature, history, and the *BMJ*.

Calculate with confidence

CIA software

Confidence Interval Analysis (CIA) is a computer program that takes the sweat out of calculating confidence intervals. Devised by Martin Gardner, professor of medical statistics, MRC Environmental Epidemiology Unit, University of Southampton. The program is menu driven with easy access to each chapter and to the method required within each chapter. Topics covered include calculating confidence intervals for:

- means and their differences
- proportions and their differences
- regression and correlation
- non-parametric analyses

For each method relevant intermediate statistics and the required confidence interval are produced on the screen. Complete with its own manual, the program may also be used in conjunction with the book *Statistics with Confidence,* which provides numerous worked examples. The software is available for IBM compatibles on either a 5¼″ or a 3½″ disk.

Price: £65.00. Educational establishments, research institutes, and the NHS — £45.95. Prices include VAT in the UK and air mail despatch abroad.

The book *Statistics with Confidence – Confidence intervals and statistical guidelines* is available price £7.95 in the UK and £9.50 abroad (BMA members £7.45 and £9.00, respectively)
